Our history

Doctor Manut is an expert in ear and hearing problems from his long experience as an ENT doctor (Ear Nose Throat doctor) for over 40 years. He is a consultant staff specialist for many leading hospitals in Thailand as well as top university hospitals in Bangkok.

Dr. Manut founded Eartone almost 20 years ago. At that time, he wanted to bring the latest technologies and the efficient products that he believed could improve his patients' quality of life. Bringing only the products that he trusted, Doctor Manut decided to introduce Beltone, a renowned brand from the United States, and Phonak from Switzerland, leading brands of the world to his patients.

Eartone hearing aids meet the highest international standards. Every single device is manufactured under high quality laboratory approved and certified by Beltone and Phonak. The high level of quality is reflected in all of our products, which is why after nearly 2 decades Eartone still remains the sole distributor of Beltone and Phonak in Thailand.

Our Eartone Comprehensive Care system

When a patient walks into Eartone, we always try our best to solve his/her problems. We realize that every patient is unique, so diagnosis is always made with thoroughness by following our “Eartone comprehensive care system”

Beginning by the assessment of the patient problems, our doctors interview the patients regarding the symptoms. Then patients undergo visual examination of the ear via microscope. The problems can be seen at this stage and are treated accordingly. With our real-time TV link broadcast, the patient and their family can also see the abnormalities and the treatment processes.

Our center offers numerous hearing and ear associated tests and diagnostic tools, which are from the latest available technology from around the world, helping us to accurately diagnose patients even with rare and complicated symptoms.; for example Pure-tone and speech Audiogram, Tympanogram, Acoustic reflex test, Eustachian tubal sonogram [ETS],

Auditory Brainstem response [ABR], Electrocochleogram, Auditory Steady State Response[ASSR] etc.

The test results are interpreted by Ear specialist doctor and explained to the patient. Then, the doctor tailors the treatment to the patient’s needs. Usually the problem is hearing loss such as Age-related hearing loss [Presbycusis]. Then the patients is fitted with appropriate hearing devices.

Our main products include Custom-made Hearing aids. We are also well-experienced in providing Completely-hide-in-the-canal hearing aids [CIC], which others can hardly tell that the patient is wearing a hearing aids.

Visiting the center

Eartone Thailand has several clinics in Bangkok. Our two main centers are located in the heart of Bangkok. One is located on the first floor of Bangkok Mediplex Building, which is directly connected to BTS Ekkamai station at Sukhumvit42. Another one is at Sukhumvit 22 near BTS Phrompong

opposite the Imperial Queen’s park Hotel. We also have branches in many provinces throughout the country.

Since our specialty is sought after by many patients and our priority is to deliver only excellent quality of care. A telephone appointment is strongly advice prior to a visit to any of our branches.
